## THE FOUNDATION FOR GOVERNMENT OPERATIONS

**What is Vermont ERP?**  
Enterprise Resource Planning technology provides a central platform for all core processes needed to run the state of Vermont

Budget/Finance, HR, and Grants Administrators can leverage a unified platform to automate tasks and collaborate in real-time

### WHY?

**Break down silos.** Finance and ops integrated into one platform. Spend less time relaying info and compiling spreadsheets and more time on analysis and optimization.

**Reduce integration work.** Errors that result from non-integrated systems waste time and money.

**Business transformation.** The current hodge-podge of systems, workarounds, and manual processes create major roadblocks for HR and finance teams and put the state at risk.

### SCOPE

There are three distinct components:

**Financial:** manage the State's finances, budget, & compliance

**Human Resources and Workforce:** employee info, benefits, payroll, performance management, and recruitment

**Grants Administration:** tools for Agencies and Depts to manage and track State grants

### VALUE TO VERMONT

**Improve delivery of public services.** More effective, equitable, and accessible services in all areas of state government.

**Support a tech-savvy workforce.** People expect systems that work like apps used in their personal lives. Legacy systems limit worker productivity, fueling frustration and burnout.

**Secure Vermonters' data.** Comply with the latest security standards.

### INTENDED OUTCOMES

**Virtually anytime, anywhere, from any device.** Timesheets, pay stubs, time-off requests, and more at your fingertips. Secure remote connections with a consistent experience across devices.

**Optimized decision-making:** real-time financial and personnel info, project allocation, and cost modeling.

**Shifting from manual to automatic:** Automate transaction processing and compliance.
